Services*

“We started this company with a vision, believing that a different approach to steel construction was possible. Our goal was simple, provide excellent product and excellent service. That vision developed as a reality over the course of more than eleven years working nationally and internationally, always demonstrating we firmly abide by our positioning: Customers first.

Our team is flexible and highly efficient at listening, analyzing and responding to our customer's needs. We deliver cost effective, customized design solutions that address each client's special requirement. Customer satisfaction is our primary measure of successful performance, and the best indicator of this satisfaction is our growing list of repeat customers and referred projects.”

Michael Lassner, CEO

Allied Steel Buildings is a recognized leading supplier of highquality preengineered steel buildings and metal building systems. We are a customer centric organization, able to integrate design, engineering, fabrication and construction of each project. One customer and one building at a time.

Allied Steel Buildings

approach emphasizes an integrated project management process. The sectoral and geographic diversity of our projects expands our knowledge, which our team transforms into practical design solutions that create real value for clients, users and communities. While we are most wellknown for delivering steel buildings, we provide much more. We create an unshakable foundation for each customer's project by implementing our proven management system. Results are project on time and within budget.

Idea

With a multicultural staff base from 27 cities around the world, we bring a depth of understanding of different local cultures, economies and environmental conditions. Whatever and wherever your idea might be, we can help to make it real.

Design

The design process will shape your idea. We value your opinion and propose a bilateral stream of collaboration that ensures your specifications and particularities of the project are transferred to our drawings.

Engineering

At Allied Steel Buildings, we use efficient inhouse detailing and design techniques to achieve optimal project development. All of our steel buildings are engineered to meet the most rigorous code standards all over the world.

Fabrication

Throughout continuous cooperation, we continue to ensure optimal fabrication in seventeen factories across North America, and more to come, guaranteeing each one of our projects is delivered ontime and within budget.

Construction

We offer construction management, consultancy and logistical solutions, customizing our offer to your needs. Our team consists of qualified managers, professionals and builders offering general construction services worldwide.

Our national network across Canada provides clients with a breadth of expertise and knowledge in design, engineering, manufacturing and construction. In more than eleven years of experience, we have developed more than 2,000 different steel projects, delivering building solutions for diverse industries, from aviation to warehousing.

Big or small, customers first.
